

Your outside counsel... working from the inside

The Bioscience Team at Furman Gregory Deptula will assist you no matter what stage you're at, from the creation of intellectual property through its commercialization. We leverage our legal, business and technology expertise to move your business forward.

- ◆ Patent Prosecution/Diligence
- ◆ Licensing/Partnering
- ◆ Transactional
- ◆ Finance/Private Equity
- ◆ Industry Agreements
- ◆ Trademark, Copyright, Trade Secrets
- ◆ General corporate matters

Karin A. Gregory, MPH

With over 30 years of experience Ms. Gregory's practice focuses on life sciences companies and research institutions. Her background and experience with technology commercialization and small business position her well to counsel clients on the daily issues facing them. The majority of the practice involves business counsel and advising on partnering, regulatory issues, including FDA and FTC issues of advertising and promotion of medical products, licensing, collaboration agreements, issues of confidentiality, genetic testing in medicine and invention protection, venture capital and strategic corporate partnering, along with other related business transactional matters.

Wayne A. Keown

Dr. Keown is a highly experienced patent prosecutor of 20 years with a strong background in Pharma/Biotech matters. Additionally, he has extensive experience in U.S. and European patent office and court proceedings, Pharma/Biotech collaboration agreements and public and private investments; prosecution, litigation, due diligence, opinion work, licensing and portfolio development and management. Wayne's legal career included founding a small patent law firm in Massachusetts, and practicing patent law with Hale and Dorr LLP as a senior partner. He also served as sole in-house patent counsel to Hybridon, Inc., where he developed and managed a large patent portfolio and negotiated Pharma/Biotech collaboration and research agreements.

William O. Fabbri

Mr. Fabbri has over a decade of experience working with life science companies. Bill works with companies on a number of transactional and contractual matters including business development transactions such as licensing, collaborations and distribution agreements, core industry agreements such as sponsored research, manufacturing, clinical trial and CRO agreements, financings, corporate governance and Board matters and employment and consulting agreements. With his experience both working as in-house and outside counsel, Bill understands how to work with a company's various teams, including management, directors and scientists, as a business partner, not just as an attorney.

Christopher Drabik

Mr. Drabik's practice includes intellectual property counseling, licensing transactions and patent prosecution with experience in technology evaluation and freedom to operate analyses; providing legal guidance related to in and out-licensing of therapeutic agents; and drafting and negotiating collaboration, licensing, material transfer and other pharma/biotech-related agreements. Prior to joining FGD, he served as legal counsel at an early stage pharma company with CNS drug candidates in phase I and phase II clinical trials. Mr. Drabik brings to FGD his experience as an examiner at the USPTO, where he examined applications in the arts of gene therapy, transgenic animals and transgenic plants. Mr. Drabik earned his Master's degree in molecular biology performing research related to understanding the effects of chromatin structure and DNA topology on transcription and he has more than ten years of research experience in academic and pharma industry labs.
